## *Overview*

---

Dental implants are one of the most significant advancements in dentistry. If you're missing teeth or considering opinions for tooth replacement, dental implants might be for you! Dental implants will not only help restore your smile, but your confidence and oral health as well. In this blog we will explore what dental implants are, the benefits of them, and why they might be the right choice for you!

## *What Are Dental Implants?*

---

A dental implant is an artificial tooth root placed in your jawbone to secure a replacement tooth or bridge. The implants fuse with the jawbone overtime, creating a sturdy and long lasting foundation for the artificial teeth. They are designed to function, feel, and look like natural teeth. This makes dental implants a top choice for anyone looking to improve their smile, confidence or oral health.
